

Dear Sirs and Madames:

I would like to express my opposition to docket 01-290: the proposal to use part of the amateur 420-450 MHz spectrum for a commercially licensed product.

I'm quite worried about the potential in-band interference with amateur services that such products would produce, and, as a practicing engineer, I can think of no reason why this application must use, specifically, frequencies within the approved amateur radio portions of the spectrum. If cost is being used as the justification, I cannot believe that any cost savings would be that significant when compared to costs of using frequencies lying just outside this band.

My Best Regards,

Jeff Anderson, WA6AHL
